maximizing human performance

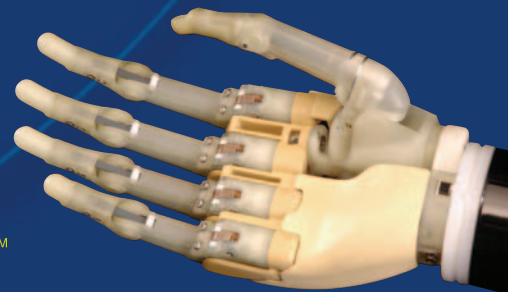

biodesigns now offers the i-LIMB™: the world's most advanced commercially available bionic hand

The i-LIMB™ hand comes closest to mimicking the function of the human hand in a commercially available product. Its five individually powered digits provide new levels of dexterity that until now simply were not available. The i-LIMB™ hand allows the user to grasp objects with more confidence than ever before, all while offering a more natural and life-like appearance.

biodesigns, located in Southern California, provides patients with leading-edge upper extremity prosthetic products & services. Our proprietary clinical approach utilizes state-of-the-art technology, techniques, and high-performance interfaces that will take you where others simply cannot. Whether you are a first time patient or have been frustrated with your results in the past, **biodesigns** will deliver the ultimate prosthetic experience.

Having trained hundreds of practitioners in upper extremity prosthetic care, including clinicians currently providing service at Walter Reed, Brooke Army Medical Center and the San Diego Naval Medical Center, **biodesigns'** founder and Chief Prosthetist Randall Alley has built a world-wide reputation for being an innovator and educator in the prosthetic field. Alley is also working with DEKA Research and DARPA to develop the next generation upper extremity prosthesis for the military.
